Maple Gardens Rehabilitation and Nursing Center

Delena Morgan has been a resident at Maple Gardens since August, battling various illnesses and infections that later led to a below-knee amputation.

While awaiting her prosthetic device, Delena began therapy to focus on lower extremity strengthening, stretching, standing, and transfers in preparation for her to be able to ambulate once she received her prosthetic device. Once Delena received her prosthetic, she was so excited to show everyone and tell them how she got to pick out the color.

She set a goal for herself to walk out of the facility and go home in two weeks. Delena worked hard every day in therapy and was able to meet her goals and was discharged to home in two weeks.
